

**Hey Geeks,
I'm
Nikhil**

**WEB
DEVELOPER**

Special Skills:

- **HTML**
- **CSS**
- **Javascript**
- **BootStrap**

About:

Self-motivated IT professional with keen knowledge and proficiency in JavaScript, HTML, CSS, and website development, as well as highly potent skills and ability in encoding error-free and efficient code, seeking and opportunity for the Front End Developer roles.

My Projects:

SHA-512 E/D System

It is completely based on JAVA. Basically, a user gives an input and the SHA-512 algorithm convert it to a cipher text which is totally encrypted and can be used as a password for the authorization purpose.

Bank Management System

A platform where user can create an account, check balance, deposit money, delete an account and check how many of them are present.

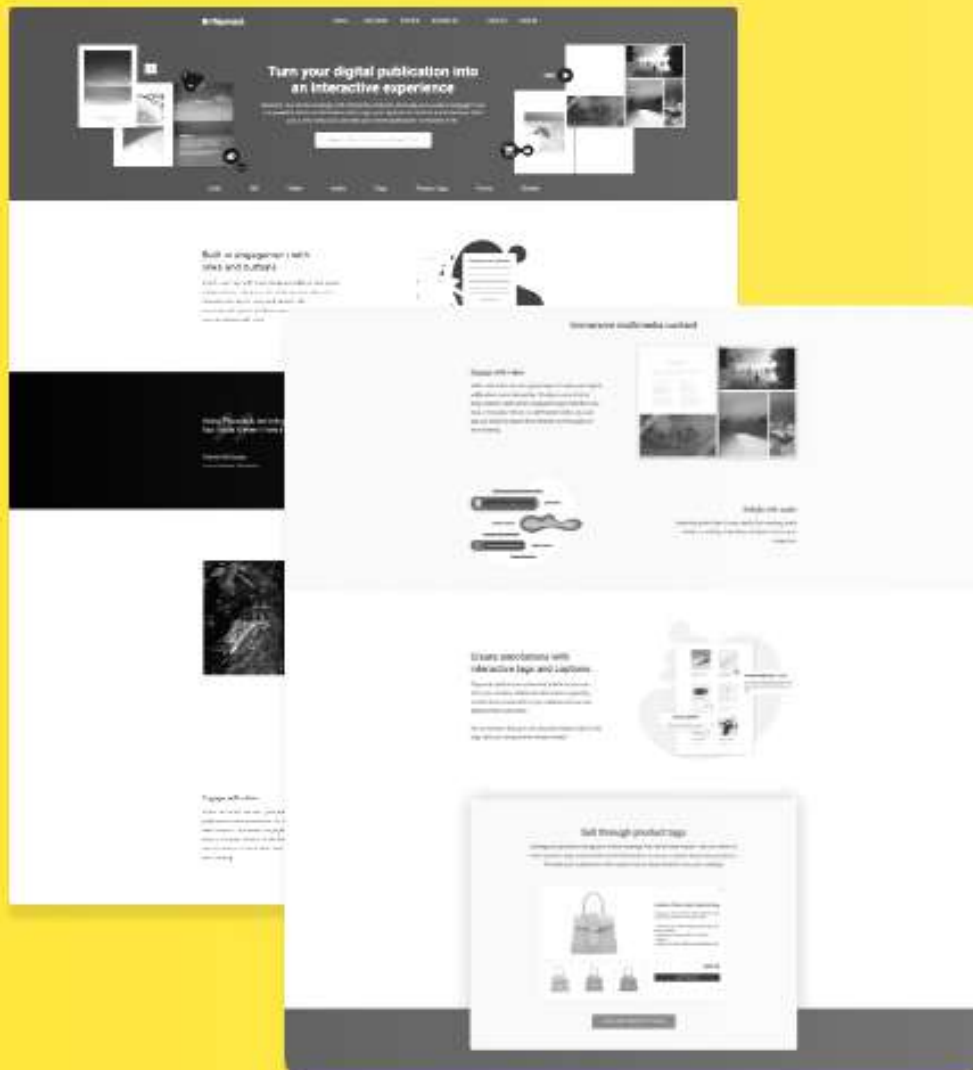

Based on C++ language. All the accounts and their details are stored in a separate files using File Management in C++.

My Inspiration:

"A designer knows he has achieved perfection not when there is nothing left to add, but when there is nothing left to take away."

- Antoine de Saint-Exupéry

A person is seen from behind, sitting at a desk in a dimly lit office. They are looking at a computer monitor that displays a code editor with a dark theme and syntax-highlighted code. The person is wearing a brown jacket over a plaid shirt. In the background, there are blurred lights and another person's head, suggesting a collaborative work environment.

Why choose me?

I work hard to make your job easier! Project managers like not having to worry about my deadlines; I stick to the schedule and communicate with the team often to keep everyone up-to-date. Designers like not having to worry that their coded design will come back mangled; I strive to stay true to their creative vision. Technical managers like not having to worry about the quality of the code they'll receive, well-commented and ready to integrate
